Job Description

Job Title- Solution Architect- SAP Warehouse Management (WM)

About Us- Established in 2017 in the UK, Percipere is a fast-growing Premier Process Integrator for ERP and Process re-engineering engagements that works with leading clients in Europe, America, Middle East and India. We have ambitious growth targets, and this role will play a pivotal role in helping achieve these targets.

Location: UK

Experienced Required- 10+ Years

Role Description: The Solution Architect - SAP WM is responsible for applying business & technical expertise to design, implement and support the current business capabilities into SAP WM, related SAP modules. In this role, the candidate shall support global supply chain business team in various areas such as Supply Chain, Logistics, Shipping, Inventory Management, Production Supply, and related processes. The applicant should also have broad knowledge of SAP. The applicant should have the ability to support advanced business functions, translate complex business requirements into solution designs, and build and implement systems and technical solutions for operations.

Job Requirements:
- Around 12+ years of total experience in the SAP supply chain focused on SAP ERP design, implementation, and support.
- 10+ years of experience in SAP Warehouse Management and Logistics Execution modules with secondary expertise in Materials Management within manufacturing organizations.
- Deep understanding of the integration with S/4 HANA Cloud WM, Embedded EWM and other SAP modules such as PP, SD, FI etc.
- Experience in design and implementation of handheld devices in warehouse processes such as picking, shipping etc.
- Experience in working with business process/activity owners in understanding business requirement and solution design.
- Shall have knowledge in handling ITSM tools such as Spirit, ServiceNow etc.
- Experience in design and implementation of EDI interface with 3PL warehouse systems and related business process.
- Expertise in other related areas such as Master data (Material Master, Control Cycles, condition records etc.), Stock Transfers, Batch management, Classification, Reporting, Queries etc.
- Strong relationship building skills
- Experience in Global Trade System and/or Shipping System.

Job Responsibilities :
- Establish relationships with Supply Chain (primarily Logistics, Warehouse, Shipping but also other Operations functions and Quality) and super users globally.
- Collaborate with business users in Supply Chain Dept. and other departments when needed, to gain a deep understanding of their business processes and requirements.

- Design, develop, and test system solutions to address business requirements, in alignment with the global solution template.
- Collaborate with other functions and teams to ensure solution designs are well integrated and aligned to the overall enterprise architecture.
- Collaborate with business teams globally to gain a deep understanding of business processes, requirements and develop, test the processes to address business requirements.
- Configure SAP WM, LE, MM modules (or other modules as needed) to meet business requirements, including integration points with other SAP modules or other applications, following SAP best practices.
- Develop functional specifications for custom developments and collaborate with the development team to get those built and tested.
